

## 24-HOUR IMPACT-BASED FORECAST FOR GHANA

| Weather Forecast Risk Matrix |                    |          |        |      |
|------------------------------|--------------------|----------|--------|------|
| Likelihood ↑                 | High (> 60%)       | G        | H      | I    |
|                              | Medium (40% – 60%) | D        | E      | F    |
|                              | Low (< 40%)        | A        | B      | C    |
|                              |                    | Low      | Medium | High |
|                              |                    | Impact → |        |      |

| Weather Icons |      |      |     |      |      |
|---------------|------|------|-----|------|------|
|               |      |      |     |      |      |
| Rain          | Wind | Dust | Fog | Hail | Mist |

| Sector     | Minimum Temperature (°C) | Maximum Temperature (°C) |
|------------|--------------------------|--------------------------|
| Coast      | 24                       | 28                       |
| Forest     | 23                       | 28                       |
| Transition | 23                       | 30                       |
| Northern   | 24                       | 32                       |

**SUMMARY:** A band of thunder and rain cloud observed over the middle and transitions sectors is currently producing thunderstorms and rain of varying intensities over most places within *Oti, Savannah, Ahafo, Bono East, Bono, Eastern and Ashanti regions*. The storm is expected to propagate westwards to affect most areas along the western flank of the country from this evening into the night. Mist or fog patches will form over the mountainous and forest zones in the early hours of tomorrow.
