24-HOUR IMPACT-BASED FORECAST FOR GHANA

Weather Forecasting Risk Table

Likelihood ↑	High (>60%)	G	H	I
	Medium (40% - 60%)	D	E	F
	Low (<40%)	A	B	C
		Low	Medium	High

← Impact →

Sector	Minimum Temperature (°C)	Maximum Temperature (°C)
Coast	24	34
Forest	23	35
Transition	22	37
Northern	25	41

SUMMARY: As forecast earlier in the *Evening*, the system currently observed along the Nigeria-Benin border is expected to propagate westward. This movement will increase cloud cover which will induce cloudiness and produce thunderstorms or rain of varying intensities over the coastline and the inland areas of the country for the night hours. Early morning mist or fog patches will occur over areas within the mountainous and forest zones amidst rainfall over few areas in the southwestern part of the country. However, sunny conditions will be observed in most sectors for the afternoon.

SIGNED: Central Analysis and Forecasting Office (CAFO)
