Rain	Wind	Dust	Hail	Mist	Fog

Sector	Minimum Temperature (°C)	Maximum Temperature (°C)
Coast	25	33
Forest	24	35
Transition	23	36
Northern	27	39

SUMMARY: A weak rainstorm situated over the gulf is expected to induce cloudiness and produce slight to moderate thunderstorms or rain over parts of the coast and the inland areas this night. However, isolated thunderstorms or rain are also expected over the transition and northern sectors. During the early morning hours, mist and fog patches may develop over mountainous and forest zones. As the day advances into the afternoon, sunny weather will prevail across all sectors with rain and thundery activities anticipated over the middle, transition and northern sectors from late afternoon into the evening.
