SUMMARY: A rainstorm observed over the border of Benin and Togo is propagating westward into our country. The storm is expected to induce cloudiness and produce thunderstorms or rain of varying intensities which will affect areas along the eastern flank of the country from this night into the early hours of tomorrow. During the early hours of the morning, mist or fog patches will occur over areas within the coast, forest and mountainous areas which will reduce visibility amidst rainfall over few areas in the western part of the country.

SIGNED: Central Analysis and Forecasting Office (CAFO)
