## 18-HOUR IMPACT-BASED FORECAST FOR GHANA

| Weather Forecasting Risk Table |                    |          |        |
|--------------------------------|--------------------|----------|--------|
| Likelihood ↑                   | High (>60%)        | G        | H      |
|                                | Medium (40% - 60%) | D        | E      |
|                                | Low (<40%)         | A        | B      |
|                                |                    | Low      | Medium |
|                                |                    | Impact → |        |

| Sector     | Minimum Temperature (°C) | Maximum Temperature (°C) |
|------------|--------------------------|--------------------------|
| Coast      | 24                       | 31                       |
| Forest     | 23                       | 33                       |
| Transition | 23                       | 34                       |
| Northern   | 25                       | 35                       |

**SUMMARY:** Slight rain is forecasted along the coastline and parts of the inland areas this morning. Mountainous, hilly and forest areas are expected to experience mist or fog patches with reduced visibility early in the early hours of the day. As the day progresses, mostly cloudy weather will dominate leading to thunderstorms or rain over most parts of the country from the afternoon into late evening hours.
