

## 18-HOUR IMPACT-BASED FORECAST FOR GHANA

| Weather Forecasting Risk Table |                    |          |        |
|--------------------------------|--------------------|----------|--------|
| Likelihood ↑                   | High (>60%)        | G        | H      |
|                                | Medium (40% - 60%) | D        | E      |
|                                | Low (<40%)         | A        | B      |
|                                |                    | Low      | Medium |
|                                |                    | Impact → |        |

| Sector     | Minimum Temperature (°C) | Maximum Temperature (°C) |
|------------|--------------------------|--------------------------|
| Coast      | 23                       | 30                       |
| Forest     | 23                       | 33                       |
| Transition | 22                       | 33                       |
| Northern   | 25                       | 34                       |

**SUMMARY:** Slight to moderate rain is forecasted for areas along the coastline and few areas within Oti region this morning. The rain may persist intermittently along the coastline and its environs through into the afternoon and evening hours. Also mist and fog patches will reduce visibility over the forest and mountainous areas early this morning. Thunderstorms or rain are expected over the middle, transition and northern sectors from later afternoon into the evening hours.
