

18-HOUR IMPACT-BASED FORECAST FOR GHANA

Weather Forecasting Risk Table			
Likelihood ↑	High (>60%)	G	H
	Medium (40% - 60%)	D	E
	Low (<40%)	A	B
		Low	Medium
		Impact →	

Sector	Minimum Temperature (°C)	Maximum Temperature (°C)
Coast	22	30
Forest	23	33
Transition	23	33
Northern	23	34

SUMMARY: Places within Upper West, Upper East, North East, Savannah and the Northern regions are expected to experience **thunderstorms** of varying intensities due to developments of thunder and rain-bearing clouds that are engulfing the northern sector. However, there is an active **rainstorm** observed over Nigeria which is expected to propagate westwards to affect portions of the North and transition belts later in the day. Southern Ghana is anticipated to experience intermittent slight rain or drizzle in the early hours of the morning and thunderstorms of varying intensities during the afternoon and evening hours.
