

18-HOUR IMPACT-BASED FORECAST FOR GHANA

Weather Forecasting Risk Table			
Likelihood ↑	High (>60%)	G	H
	Medium (40% - 60%)	D	E
	Low (<40%)	A	B
		Low	Medium
		Impact →	

Sector	Minimum Temperature (°C)	Maximum Temperature (°C)
Coast	24	31
Forest	24	32
Transition	23	34
Northern	24	36

SUMMARY: The northern and transition belts will continue to experience thunderstorms with rain of varying intensities this morning. Some areas along the coast and middle sector are also likely to experience localized rainfall activities. However, mist and fog patches will form over forest and hilly areas to reduce visibility range in the early hours of the morning. As the day unfolds, sunny intervals will dominate across all sectors with the possibility of late afternoon thunderstorms with rain over some areas in the middle, transition and northern sectors.
