## 18-HOUR IMPACT-BASED FORECAST FOR GHANA

| Weather Forecasting Risk Table |                    |          |        |      |
|--------------------------------|--------------------|----------|--------|------|
| Likelihood ↑                   | High (>60%)        | G        | H      | I    |
|                                | Medium (40% - 60%) | D        | E      | F    |
|                                | Low (<40%)         | A        | B      | C    |
|                                |                    | Low      | Medium | High |
|                                |                    | Impact → |        |      |

| Sector     | Minimum Temperature (°C) | Maximum Temperature (°C) |
|------------|--------------------------|--------------------------|
| Coast      | 23                       | 31                       |
| Forest     | 22                       | 32                       |
| Transition | 22                       | 33                       |
| Northern   | 24                       | 35                       |

**SUMMARY:** Cloudy conditions along the coast and inland areas may produce **slight rain or drizzle** tonight into tomorrow morning, while isolated thunderstorms or rain are expected over parts of the northern sector. Mist or fog patches will reduce visibility in mountainous and forest areas early tomorrow morning.
