

18-HOUR IMPACT-BASED FORECAST FOR GHANA

Weather Forecasting Risk Table			
Likelihood ↑	High (>60%)	G	H
	Medium (40% - 60%)	D	E
	Low (<40%)	A	B
		Low	Medium
		Impact →	

Sector	Minimum Temperature (°C)	Maximum Temperature (°C)
Coast	24	29
Forest	23	30
Transition	22	32
Northern	24	32

SUMMARY: As mentioned in the previous weather updates, the northern sector will continue to be affected by the *thunder and rain-bearing clouds* which are producing **moderate to heavy thunderstorms with rain accompanied by gusty winds**. However, mist and fog patches are expected to form and reduce visibility range for much of southern Ghana this morning amidst mostly cloudy conditions. There is a slight chance of light rains or drizzle over portions of the coast and inland areas during the morning hours.
