18-HOUR IMPACT-BASED FORECAST FOR GHANA

Weather Forecasting Risk Table				
Likelihood ↑	High (>60%)	G	H	I
	Medium (40% - 60%)	D	E	F
	Low (<40%)	A	B	C
		Low	Medium	High
		Impact →		

Sector	Minimum Temperature (°C)	Maximum Temperature (°C)
Coast	23	29
Forest	23	30
Transition	23	31
Northern	23	33

SUMMARY: As indicated in the earlier weather update, the rainstorm currently affecting the transition sector is expected to move westwards, producing thunderstorms or rain of varying intensities to additional areas within the sector. Mostly cloudy conditions will prevail the rest of the country, with slight rain likely over parts of the coast and some inland areas tonight and tomorrow morning. During the early hours of tomorrow, mist or fog patches are expected to develop over parts of the mountainous, coastal, and forest zones, leading to reduced visibility.

SIGNED: Central Analysis and Forecasting Office (CAFO)
