

18-HOUR IMPACT-BASED FORECAST FOR GHANA

Weather Forecasting Risk Table			
Likelihood ↑	High (>60%)	G	H
	Medium (40% - 60%)	D	E
	Low (<40%)	A	B
		Low	Medium
		Impact →	
		High	

Sector	Minimum Temperature (°C)	Maximum Temperature (°C)
Coast	23	30
Forest	24	32
Transition	23	33
Northern	25	34

SUMMARY: During the early hours of the morning, mist or fog patches are expected over parts of the coastal, forest, and mountainous areas, reducing visibility. Thereafter, mostly cloudy conditions will prevail across southern Ghana, while the northern half of the country remains partly cloudy. As the day progresses, mostly sunny weather with occasional cloud cover are expected across most parts of the country. However, from late afternoon into the evening, there is a low chance of rain with or without thunder over a few places within the transition and northern sectors.
