

18-HOUR IMPACT-BASED FORECAST FOR GHANA

Weather Forecasting Risk Table			
Likelihood ↑	High (>60%)	G	H
	Medium (40% - 60%)	D	E
	Low (<40%)	A	B
		Low	Medium
		Impact →	

Sector	Minimum Temperature (°C)	Maximum Temperature (°C)
Coast	23	29
Forest	22	31
Transition	22	31
Northern	23	32

SUMMARY: The rainstorm mentioned in the earlier Weather Warning continues to move westward and is expected to affect parts of the northern sector this morning. The system may persist into the afternoon, bringing thunderstorms and rain of varying intensities. Meanwhile, mist and fog patches are expected over parts of the coastal, forest and mountainous areas, reducing visibility. Over the southern sector, mostly cloudy conditions are expected, with brief intervals of sunshine. A few areas may experience slight rain or drizzle from the afternoon into the evening.

NB: Relatively cool night and early morning temperatures are expected across the country.
