18-HOUR IMPACT-BASED FORECAST FOR GHANA

Weather Forecasting Risk Table				
Likelihood ↑	High (>60%)	G	H	I
	Medium (40% - 60%)	D	E	F
	Low (<40%)	A	B	C
		Low	Medium	High
		Impact →		

Sector	Minimum Temperature (°C)	Maximum Temperature (°C)
Coast	23	29
Forest	22	30
Transition	23	32
Northern	24	33

SUMMARY: The rainstorm mentioned in the *weather warning* issued earlier is currently engulfing the north eastern portions of the country. The storm is expected to continue to produce thunderstorms of varying intensities while drifting westwards towards the Upper West and Savannah regions. Other areas in the country will be dominated by mostly cloudy weather with possibility of slight rain or drizzle. Early in the morning, mist and fog patches will also dominate over the coastal, forest and hilly areas in the morning thereby reducing visibility range.

NB: Relatively cool night and early morning temperatures are expected across the country.

SIGNED: Central Analysis and Forecasting Office (CAFO)
