

GHANA METEOROLOGICAL AGENCY

SUMMARY

- In this dekad, **Kete-Krachi** in the Transition zone recorded the highest rainfall accumulation of 151.7mm across the entire country, whereas **Koforidua** recorded 1.2mm as the lowest rainfall accumulation.

Generally, the country recorded rainfall deficits, with the exception of the **eastern** and **western parts** of the **Transition zone** which recorded surpluses as compared to their dekadal climatology means (1991–2020) (refer to Map 2).

- The highest average maximum temperature of 31.6°C for the dekad was recorded in **Akuse** and its environs, whereas **Abetifi** and its environs recorded 26.7°C, the lowest average maximum temperature across the entire country.

The entire **country** recorded warmer day-time temperatures as compared to their dekadal climatologies (1991-2020) (refer to Map 4).

- **Abetifi** and its environs recorded 20.9°C as the lowest average minimum temperature, whereas **Axim** and its environs recorded 24.5°C as the highest average minimum temperature across the entire country.

The entire **country** recorded warmer night-time temperatures with the exception of **Accra** and its environs which recorded cooler night-time temperatures as compared to their dekadal climatologies (1991-2020) (refer to Map 6).

For the next ten (10) days,

- Generally, the **country** is expected to record above normal rainfall with the exception of the **upper parts** of the **Northern sector**, which are likely to experience below normal rainfall (refer to Map 7).
- The **country** is expected to record above normal temperatures (refer to Map 9).

1.0 CLIMATIC ASSESSMENT (AUGUST 2ND DEKAD 2026)

1.1 RAINFALL AMOUNT

In this dekad, Kete-Krachi in the Transition zone recorded the highest rainfall accumulation of 151.7mm across the entire country, whereas Koforidua recorded 1.2mm as the lowest rainfall accumulation.

In the Northern sector, Bolgatanga recorded the highest rainfall accumulation of 90.1mm. Along the Coast, Cape Coast recorded 5.3mm of rainfall accumulation. Akatsi, Bechem, Dunkwa, Goaso, Ada, Tema, and Saltpond recorded no rainfall amount.

Generally, the country recorded rainfall deficits, with the exception of Kpando, Akim Oda, Bolgatanga, Wenchi, Dormaa Ahenkro, Mim, Bole, Kete-Krachi, and Sunyani, which recorded surpluses as compared to their dekadal climatology means (1991–2020). Accra, Tarkwa and their environs recorded normal conditions.

Map 2: Rainfall Anomaly Map.

1.2 MAXIMUM TEMPERATURE

The highest average maximum temperature of 31.6°C for the dekad was recorded in Akuse and its environs, whereas Abetifi and its environs recorded 26.7°C, the lowest average maximum temperature across the entire country.

Kete-Krachi recorded 30.3°C as the highest in the Transition zone. Sefwi Bekwai, Ho, and Akim Oda within the Forest zone recorded 31.1°C, 30.1°C, and 30.0°C respectively. Ada, and Accra recorded 28.7°C and 28.6°C respectively whereas Tema recorded 28.9°C as the highest average maximum temperature along the Coast.

The entire country recorded warmer day-time temperatures as compared to their dekadal climatologies (1991-2020).

Map 3: Maximum Temperature Map.

Map 4: Maximum Temperature Anomaly Map.

1.3 MINIMUM TEMPERATURE

The country recorded average minimum temperatures between 20.0°C and 25.0°C. Abetifi and its environs recorded 20.9°C as the lowest average minimum temperature, whereas Axim and its environs recorded 24.5°C as the highest average minimum temperature across the entire country. In the forest zone, Akuse recorded 24.5°C as the highest within the sector. Ada with its environs, recorded 24.2°C as the highest average minimum temperature along the Coast.

The entire country recorded warmer night-time temperatures with the exception of Accra and its environs which recorded cooler night-time temperatures as compared to their dekadal climatologies (1991-2020).

2.0 RAINFALL AND TEMPERATURE OUTLOOK FOR AUGUST 3RD DEKAD 2026

2.1 RAINFALL OUTLOOK

Week 1: Generally, the country is expected to record above normal rainfall with the exception of the upper parts of the Northern sector, which are likely to experience below normal rainfall.

Week 2: Generally, the country is expected to record below normal rainfall except for the western portions of the Northern sector, which are likely to experience above normal rainfall.

Map 7: Rainfall Outlook for Week 1

Map 8: Rainfall Outlook for Week 2.

2.2 TEMPERATURE OUTLOOK

Week 1: The country is expected to record above normal temperatures.

Week 2: The country is expected to record above normal temperatures.

Map 9: Temperature Outlook for Week 1.

Map 10: Temperature Outlook for Week 2.
