

18-HOUR IMPACT-BASED FORECAST FOR GHANA

Weather Forecasting Risk Table			
Likelihood ↑	High (>60%)	G	H
	Medium (40% - 60%)	D	E
	Low (<40%)	A	B
		Low	Medium
		High	
		Impact →	

Sector	Minimum Temperature (°C)	Maximum Temperature (°C)
Coast	23	30
Forest	22	32
Transition	23	32
Northern	24	33

SUMMARY: Formation of mist and fog patches are expected to be dominant over the forest and mountainous areas this morning with mostly cloudy condition prevailing across all sectors. However, a *moderate to heavy rainstorm* sighted at *Benin-Nigeria* border is expected to continue propagating westwards to affect places within the *north* and *transition* from late morning into the afternoon hours with *thunderstorms and rain of varying intensities*. The middle and coastal sectors are expected to have spells of sunshine during the afternoon with pockets of rainfall activities.
