

18-HOUR IMPACT-BASED FORECAST FOR GHANA

Weather Forecasting Risk Table				
Likelihood ↑	High (>60%)	G	H	I
	Medium (40% - 60%)	D	E	F
	Low (<40%)	A	B	C
		Low	Medium	High
		Impact →		

Sector	Minimum Temperature (°C)	Maximum Temperature (°C)
Coast	23	30
Forest	23	31
Transition	22	32
Northern	24	33

SUMMARY: A weak rainstorm observed over the border of Togo and Benin is expected to propagate westwards to induce cloudiness while producing thunderstorms or rain over portions of the transition and northern sectors from this morning into the evening. Mist or fog patches will reduce visibility over most places within southern Ghana in the early hours of the likelihood of slight rain over a few areas. Later in the day, variably cloudy conditions will dominate over most places within the country with expected varying intensities of thunderstorms or rain over portions of the middle, transition and northern sectors during late afternoon into the evening.
