NOVEMBER 2026 RAINFALL OUTLOOK OVER GHANA

GMET/HYDRO/1126 ***Date Issued: 26th October, 2026***

FORM 902

SUMMARY

Rainfall outlook for November 2026 is expected to be generally normal to below normal across most parts of the country. Parts of the Forest and Transition zones are likely to receive normal to above-normal rainfall. **Figure 1(a)** shows the November rainfall climatology (1991–2020), and **Figure 1(b)** shows the probabilities (percent chances) of above-normal, normal and below-normal rainfall for November 2026.

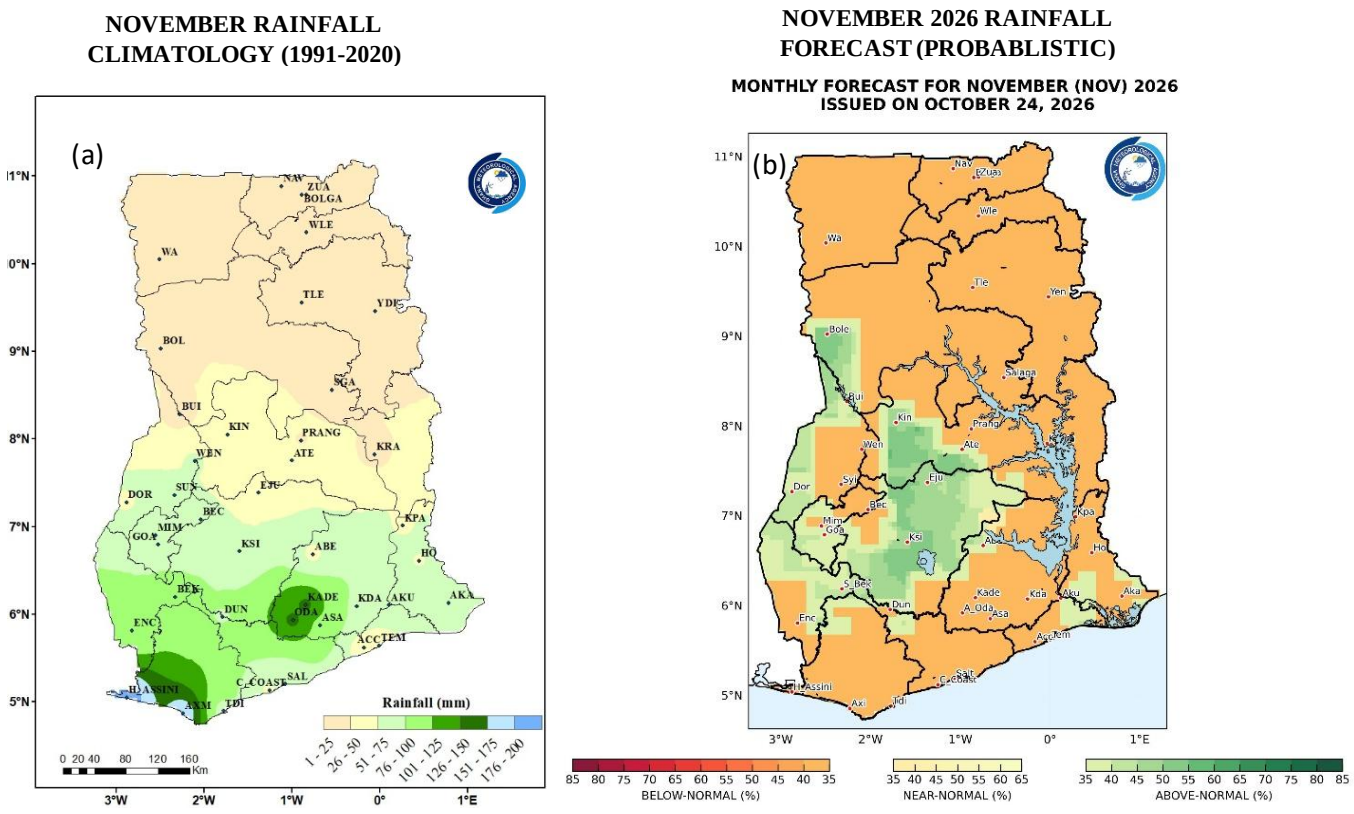

Figure 1: (a) Monthly rainfall climatology for November (1991-2020) **(b)** Probabilistic rainfall forecast for November 2026.

DESCRIPTION OF THE FORECAST

The Savannah Zone

The Savannah Zone is expected to experience normal to below-normal rainfall during the forecast period, particularly in the northern parts of the zone. However, areas in the southern portions, including Bole and Bui, are likely to receive above-normal rainfall compared with the climatological average.

The Transition zone

The Transition Zone is forecast to experience generally normal to above-normal rainfall, particularly across the central and western portions. However, the eastern parts of the zone, including Kete Krachi and Prang, are likely to receive below-normal rainfall relative to the long-term average.

The Forest Zone

The northern portions of the Forest Zone are expected to experience normal to above-normal rainfall during the forecast period. In contrast, areas in the southwest, particularly Takoradi, Axim and Half Assini, are likely to experience normal to below-normal rainfall compared with the climatological average.

The Coastal Zone

The Coastal Zone is expected to experience normal to below-normal rainfall, particularly in Cape Coast, Saltpond, Accra, Tema, and Akatsi. However, areas around Ada and its northern surroundings are likely to receive above-normal rainfall, with accumulations expected to exceed the climatological average of 40 mm.

Advisory

Residents, farmers, and stakeholders are encouraged to plan activities accordingly as most parts of the country is likely to experience below normal rains.

Please note that, in order to follow short-term weather variations, users of this outlook are advised to make use of the nowcast (six-hourly forecasts), daily forecasts and weekly forecasts routinely issued by the Ghana Meteorological Agency.
