GMet Forecast Office

24-HOUR FORECAST FOR GHANA

VALID FROM 6AM TODAY

SUMMARY: Dry and hazy weather will dominate most places within the northern and transition sectors throughout the forecast period. A lower intensity of the hazy condition is anticipated of southern Ghana. However, few cases of localised rain are likely to affect some areas along the coastline and the inland areas later in the day. **2000 meters to 9000 meters** visibility range is expected across the country.

CAUTION!

- Naked fires should be handled cautiously to prevent any form of fire outbreak due to the dryness in most parts of the country.**
- Motorists are advised to use fog lights and drive within appropriate speed limits due to deteriorated visibility.**

CITIES	WEATHER BRIEF
