

24-HOUR FORECAST FOR GHANA VALID FROM 6AM TODAY

SUMMARY: Mist or fog patches are expected across much of the southern half of the country this morning. As the day progresses, periods of sunshine will emerge amid cloud development, which may later lead to localized thunderstorms or rain along the coast and some inland areas from late afternoon into the evening. Meanwhile, the northern half will remain mostly dry and hazy throughout the forecast period. Visibility across the country is expected to range between **600 meters** and **9000 meters**.

CAUTION!

1. ***Naked fires should be handled cautiously to prevent any form of fire outbreak due to the dryness in some parts of the country.***
2. ***Motorists are advised to use fog lights and drive within appropriate speed limits due to deteriorated visibility.***
