24-HOUR IMPACT-BASED FORECAST FOR GHANA

Weather Forecasting Risk Table				
Likelihood ↑	High (>60%)	G	H	I
	Medium (40% - 60%)	D	E	F
	Low (<40%)	A	B	C
		Low	Medium	High
		Impact →		

Sector	Minimum Temperature (°C)	Maximum Temperature (°C)
Coast	23	33
Forest	22	34
Transition	23	36
Northern	25	38

SUMMARY: Cloudiness is expected to be predominant for most hours of the morning with pockets of rain showers over some places in the country. Hilly, forested and portions of the coast are likely to be affected with mist and fog patches in the early hours of the morning. However, as the day unfolds, sunny periods are expected for most areas with possibilities of late afternoon localised thundery showers over the middle and transition belts. The upper regions of the northern sector are anticipated to experience slightly hazy conditions with reduced visibility ranging from **6000 meters** to **9000 meters**.

SIGNED: Central Analysis and Forecasting Office (CAFO)
