

 Coastal Rainstorm Alert: Eastern to Western Coastline

 **Urgency:** Expected

 **Severity:** Severe

 **Certainty:** Likely

Issued:	Effective:	Onset:	Expires:
Fri 02 May 2025 14:57	Fri 02 May 2025 15:00	Fri 02 May 2025 15:00	Fri 02 May 2025 19:00

Area:
Greater Accra, Central, Western, Volta

Description:
A rainstorm is approaching Ghana from the coast of Togo and Benin, with the majority of the system expected to track over the ocean. However, coastal areas of Ghana will be affected as the storm moves westward. Communities within the Volta and Greater Accra regions will experience the weather system first, before it drifts to affect the Central and Western regions. Rainfall of varying intensity accompanied by thunder and gusty winds are anticipated throughout these coastal areas during the storm's passage.

Instruction:
Residents and visitors in coastal communities should avoid beaches and stay indoors during periods of heavy rainfall and thunderstorm activity. Fishermen and other maritime

workers should consider postponing sea activities until the storm passes. Travelers moving between affected regions should exercise caution on coastal highways where visibility may be reduced and road conditions may deteriorate.
