| Fri 09 May 2025<br>17:36 | Fri 09 May 2025<br>17:30 | Fri 09 May 2025<br>19:30 | Fri 09 May 2025<br>23:00 |

**Area:**  
Upper East, Northern East, Northern, Wa, Sawla

**Description:**  
Localized thunderstorms are currently active within the Upper West and Savannah regions of Ghana and are expected to intensify and spread throughout these areas. Simultaneously, a separate moderate to heavy rainstorm system located over the northern border of Togo and Benin is approaching Ghana's northern sector. This incoming weather system is projected to affect the Northeast, Upper East, and Northern regions between 19:30 UTC and 23:00 UTC tonight, bringing moderate to heavy rainfall, thunderstorm activity, and strong winds.

**Instruction:**

All residents in the affected regions should immediately secure loose objects around homes and businesses that could be displaced by strong winds, avoid crossing flooded roads or waterways, and seek shelter in sturdy buildings away from windows and electrical appliances. Those in flood-prone areas should be prepared to move to higher ground if necessary. Please stay tuned to Ghana Meteorological Agency updates through radio, television, or official social media channels for the latest information on this developing weather situation.
