

 Coastal Weather Warning

 **Urgency:** Expected

 **Severity:** Moderate

 **Certainty:** Likely

Issued:	Effective:	Onset:	Expires:
Sat 17 May 2025 11:12	Sat 17 May 2025 12:00	Sat 17 May 2025 12:30	Sat 17 May 2025 16:00

Area:
Greater Accra, Volta, Central

Description:
A significant rainstorm currently tracking over the Gulf of Guinea is forecast to move inland across Ghana's coastal regions. Accra, Tema, Ada, Ashaiman, Keta, Saltpond, Winneba, Cape Coast, Apam and surrounding communities are expected to experience widespread cloudiness accompanied by cases of rain varying in intensity from moderate to potentially heavy. Thunderstorm activity is expected to develop in multiple areas with occasional strong, gusty winds.

Instruction:

Avoid crossing flooded roadways or bridges, as water depths can be deceptive and currents dangerous. Fishermen and other maritime operators should postpone sea activities until conditions improve. If thunder is heard, move indoors immediately and avoid using electrical appliances. Stay informed by monitoring local radio stations for updated weather information and emergency instructions from authorities.
