GMet Forecast Office

24-HOUR FORECAST FOR GHANA **VALID FROM 6AM TODAY**

SUMMARY: Mist and patches of fog are expected to form along the coast, forest and mountainous areas with reduced visibilities this morning. However, a weak rainstorm is located over north of Benin and it is expected to drift westwards and induce cloudiness over parts of the northern sector. This cloudiness is likely to produce isolated thunderstorms or rain for the aforementioned sector. Variable cloudiness will follow as the day progresses with the likelihood of slight to moderate rains expected within Southern Ghana from afternoon into the evening hours.

NB: Cold early morning and late evening temperatures are expected over the entire country.
