## 24-HOUR IMPACT-BASED FORECAST FOR GHANA

| Weather Forecast Risk Matrix |                    |          |        |      |
|------------------------------|--------------------|----------|--------|------|
| Likelihood ↑                 | High (> 60%)       | G        | H      | I    |
|                              | Medium (40% – 60%) | D        | E      | F    |
|                              | Low (< 40%)        | A        | B      | C    |
|                              |                    | Low      | Medium | High |
|                              |                    | Impact → |        |      |

| Weather Icons |      |      |      |      |
|---------------|------|------|------|------|
|               |      |      |      |      |
| Rain          | Wind | Dust | Hail | Mist |

| Sector     | Minimum Temperature (°C) | Maximum Temperature (°C) |
|------------|--------------------------|--------------------------|
| Coast      | 22                       | 28                       |
| Forest     | 22                       | 29                       |
| Transition | 21                       | 30                       |
| Northern   | 23                       | 30                       |

**SUMMARY:** Generally, cloudy weather will persist across the country. However, few areas within southern Ghana may experience slight to moderate rain intermittently from this evening into the night. In the northern sector, the extreme portions are likely to experiences thunderstorms or rain tonight. Mist and fog patches will develop and reduce visibility along the coastal, forested and mountainous areas early tomorrow morning.

**NB:** Cool temperatures will be experienced across the country during the night and early morning hour
