24-HOUR IMPACT-BASED FORECAST FOR GHANA

Weather Forecasting Risk Table				
Likelihood ↑	High (>60%)	G	H	I
	Medium (40% - 60%)	D	E	F
	Low (<40%)	A	B	C
		Low	Medium	High
		Impact →		

Sector	Minimum Temperature (°C)	Maximum Temperature (°C)
Coast	23	30
Forest	21	31
Transition	20	31
Northern	23	32

SUMMARY: The rainstorm mentioned in the earlier update has weakened and is currently producing thunderstorms or rain over parts of the northern and transition sectors. A few areas within the middle belt and along the coast are likely to experience slight to moderate rain this morning. Mist and fog patches will form over coastal, forest and mountainous zones during the early hours. As the day progresses, variably cloudy conditions with occasional sunshine will prevail over most areas while sunny intervals will dominate the coastline. However, thunderstorms or rain are anticipated to affect parts of the coastal and middle sectors from the afternoon into the evening.
