## 24-HOUR IMPACT-BASED FORECAST FOR GHANA

Weather Forecasting Risk Table				
Likelihood ↑	High (>60%)	G	H	I
	Medium (40% - 60%)	D	E	F
	Low (<40%)	A	B	C
		Low	Medium	High
		Impact →		

Sector	Minimum Temperature (°C)	Maximum Temperature (°C)
Coast	24	29
Forest	22	31
Transition	22	32
Northern	24	32

**SUMMARY:** A rainstorm observed over the **middle** and **transition** sectors of the country is expected to induce cloudiness over most areas within the country this morning. It is anticipated to produce thunderstorms or rain of varying intensities over most areas within southern Ghana. Another weak storm observed over the Gulf of Guinea is also expected to induce cloudiness and produce rains over the coast and inland area. Mist or fog patches will form over the mountainous and forest areas thereby reducing visibility along. As the day unfolds, mostly cloudy conditions with occasional sunshine will affect all sectors of the country. However, cases of thunderstorms or rain are expected over places along the coast, middle, transition and northern sectors from the afternoon into the evening hours.
