## 24-HOUR IMPACT-BASED FORECAST FOR GHANA

Weather Forecasting Risk Table				
Likelihood ↑	High (>60%)	G	H	I
	Medium (40% - 60%)	D	E	F
	Low (<40%)	A	B	C
		Low	Medium	High
		Impact →		

Sector	Minimum Temperature (°C)	Maximum Temperature (°C)
Coast	24	31
Forest	22	32
Transition	21	32
Northern	23	33

**SUMMARY:** As mentioned in the weather warning issued earlier on, the rainstorm is currently affecting parts of Oti and Volta regions. The storm is expected to make a westward movement producing rain and thundery activities over areas in the transition sector. Mist and fog patches may develop along the coast, hilly and forest zones during the early hours of the day. As the day unfolds, sunny intervals are expected in some areas, however, rain and thundery activities are anticipated over places along the coast, middle, transition and northern sectors.
