24-HOUR IMPACT-BASED FORECAST FOR GHANA

Weather Forecasting Risk Table				
Likelihood ↑	High (>60%)	G	H	I
	Medium (40% - 60%)	D	E	F
	Low (<40%)	A	B	C
		Low	Medium	High
		Impact →		

Sector	Minimum Temperature (°C)	Maximum Temperature (°C)
Coast	23	32
Forest	23	33
Transition	22	34
Northern	21	36

SUMMARY: As mentioned in the weather warning earlier, the rainstorm has weakened and it is currently producing rains of varying intensities along the western coast leaving the eastern portions under cloudy conditions with the likelihood of slight rains. Misty and foggy conditions are expected over the forest and mountainous areas which may affect visibility. As the day unfolds, a mix of sunny conditions and cloudiness are expected across most sectors with the possibility of localised thunderstorms or rain over parts of the coast, middle, transition and northern sectors from late afternoon into the evening.

SIGNED: Central Analysis and Forecasting Office (CAFO)
