24-HOUR IMPACT-BASED FORECAST FOR GHANA

Weather Forecasting Risk Table				
Likelihood ↑	High (>60%)	G	H	I
	Medium (40% - 60%)	D	E	F
	Low (<40%)	A	B	C
		Low	Medium	High
		Impact →		

Sector	Minimum Temperature (°C)	Maximum Temperature (°C)
Coast	23	32
Forest	22	34
Transition	22	34
Northern	22	37

SUMMARY: The mountainous and forest zones of southern Ghana will have reduced visibilities due to misty or foggy weather early this morning. From mid-morning into the afternoon hours, most places within southern Ghana will experience an alternation between sun and clouds. As this condition happens, it is expected to produce thunderstorms with or without rain over some places along the west coast, Greater Accra, middle and transition sectors during the afternoon into evening hours. Northern Ghana is also anticipated to have partly cloudy to few clouds during the morning and evening hours with hot and sunny weather in the afternoon.
