24-HOUR IMPACT-BASED FORECAST FOR GHANA

Weather Forecasting Risk Table				
Likelihood ↑	High (>60%)	G	H	I
	Medium (40% - 60%)	D	E	F
	Low (<40%)	A	B	C
		Low	Medium	High
		Impact →		

Sector	Minimum Temperature (°C)	Maximum Temperature (°C)
Coast	23	32
Forest	22	34
Transition	21	35
Northern	21	37

SUMMARY: Mist and fog patches are expected to develop early this morning, reducing visibility over parts of the coastline, forest zones, and hilly areas. As the day progresses, bright and sunny conditions will dominate most areas across southern Ghana, with a possibility of localized rain clouds producing isolated thunderstorms or rain over portions of the west coast, middle sector, and transition zone from midday into the evening hours. Meanwhile, fairly dry and slightly hazy conditions will persist over some places in northern Ghana throughout the forecast period.

SIGNED: Central Analysis and Forecasting Office (CAFO)
