24-HOUR IMPACT-BASED FORECAST FOR GHANA

Weather Forecasting Risk Table				
Likelihood ↑	High (>60%)	G	H	I
	Medium (40% - 60%)	D	E	F
	Low (<40%)	A	B	C
		Low	Medium	High
		Impact →		

Weather Icons					
Rain	Wind	Dust	Fog	Hail	Mist

Sector	Minimum Temperature (°C)	Maximum Temperature (°C)
Coast	23	32
Forest	22	33
Transition	21	33
Northern	20	35

SUMMARY: The development of localised thunder clouds producing thunderstorms and rainfall activities over the middle, transition and northern belts are expected to reduce in intensity whiles casting cloudy conditions over most areas. Some portions of the coastal belt are also anticipated to experience slight rains due to the cloudy conditions in the early hours of the morning. As the day progresses into the afternoon, sunny intervals will dominate across all sectors with the likelihood of localised thunderstorms or rain affecting places in the Volta, Eastern, Ashanti, Central, Greater Accra, Western and Western North regions.

NB: Relatively cool night and early morning temperatures are expected over the upper regions.

SIGNED: Central Analysis and Forecasting Office (CAFO)
