## 24-HOUR IMPACT-BASED FORECAST FOR GHANA

| Weather Forecasting Risk Table |                    |          |        |
|--------------------------------|--------------------|----------|--------|
| Likelihood ↑                   | High (>60%)        | G        | H      |
|                                | Medium (40% - 60%) | D        | E      |
|                                | Low (<40%)         | A        | B      |
|                                |                    | Low      | Medium |
|                                |                    | Impact → |        |

| Weather Icons |      |      |     |      |      |
|---------------|------|------|-----|------|------|
|               |      |      |     |      |      |
| Rain          | Wind | Dust | Fog | Hail | Mist |

| Sector     | Minimum Temperature (°C) | Maximum Temperature (°C) |
|------------|--------------------------|--------------------------|
| Coast      | 23                       | 32                       |
| Forest     | 22                       | 33                       |
| Transition | 21                       | 34                       |
| Northern   | 21                       | 35                       |

**SUMMARY:** During the early hours of the day, mist or fog patches will form over the coastal, forest and mountainous areas, reducing visibility. From mid-morning into the afternoon, sunny weather with occasional cloudiness will prevail over southern Ghana. However, there is a likelihood of thunderstorms or rain affecting parts of the coastline and inland areas from this afternoon into the evening. The northern half will experience fairly dry and slightly hazy weather throughout the forecast period.

**NB:** *Relatively cool night and early morning temperatures are expected over the upper regions.*
