24-HOUR IMPACT-BASED FORECAST FOR GHANA

Weather Forecasting Risk Table

Likelihood ↑	High (>60%)	G	H	I
	Medium (40% - 60%)	D	E	F
	Low (<40%)	A	B	C
		Low	Medium	High

Impact →

Weather Icons

Sector	Minimum Temperature (°C)	Maximum Temperature (°C)
Coast	24	34
Forest	22	36
Transition	21	37
Northern	21	40

SUMMARY: Early this morning, mist or fog patches will affect parts of the coast, forested, and hilly areas, potentially reducing visibility in these areas. Thereafter, sunny conditions will prevail across the country with a higher intensity expected over the northern sector. However, localised thunderstorms or rain are likely to affect a few places along the coastline, the immediate inland areas of the coast and the middle sector from late afternoon into the evening hours. Dry and hazy conditions will dominate the northern and parts of the transition sectors throughout the forecast period. Visibility across the country will range between *500 meters* and *8000 meters*.

NB: *Relatively cool night and early morning temperatures are expected over the northern sector.*
