## 24-HOUR IMPACT-BASED FORECAST FOR GHANA

Weather Forecasting Risk Table			
Likelihood ↑	High (>60%)	G	H
	Medium (40% - 60%)	D	E
	Low (<40%)	A	B
		Low	Medium
		Impact →	

Sector	Minimum Temperature (°C)	Maximum Temperature (°C)
Coast	24	34
Forest	23	36
Transition	21	37
Northern	20	39

**SUMMARY:** Mist or patches of fog will affect parts of the coastal, mountainous and forest areas during the early hours of today potentially reducing visibility. As the day goes by, bright and sunny conditions with periodical cloudiness will be experienced over most parts of southern Ghana. However, from late afternoon into the evening hours, localised cases of rainfall with thundery activities are expected over some places slightly north of the coastline, as well as the middle and transition sectors. Dry and hazy conditions will dominate the northern and parts of the transition sectors throughout the forecast period with nationwide visibility ranging from *500 meters to 10000 meters*.

**NB:** *Relatively cool night and early morning temperatures are expected over the northern sector.*
