24-HOUR IMPACT-BASED FORECAST FOR GHANA

Weather Forecasting Risk Table			
Likelihood ↑	High (>60%)	G	H
	Medium (40% - 60%)	D	E
	Low (<40%)	A	B
		Low	Medium
		Impact →	

Sector	Minimum Temperature (°C)	Maximum Temperature (°C)
Coast	24	34
Forest	23	36
Transition	21	37
Northern	22	39

SUMMARY: Mist or fog patches are expected to develop along the coast, hilly and forest zones, which may affect visibility early this morning. This condition, will clear, paving way for sunny conditions across the entire country with occasional cloudiness for some places in southern Ghana as the day progresses into afternoon time. However, from late afternoon into the evening, localised thunderstorms or rain are likely over some coastal areas, slightly north of the coastline and parts of the middle sector. The northern sector and few places within the transition belt are expected to experience varying dry and hazy weather throughout the forecast period. Visibility expected to range between *400m and 9000m*.

NB: *Relatively cool night and early morning temperatures are expected over the northern sector.*
