

## 24-HOUR PM2.5 AIR QUALITY FORECAST FOR GHANA

Date Issued	Time Issued	Valid time	Valid date
16/02/2026	1800UTC	00UTC	17/02/2026

### SUMMARY

Air quality across the country is expected to show a marked North–South gradient over the next 24 hours. The **Southern coastal and Forest zones** are forecast to remain within the Good category, supporting normal outdoor activities. Much of the **middle belt** will experience Moderate conditions. In contrast, the **Northern sector**, including Upper West, Upper East, North-East and parts of the Northern Region, is expected to record **Unhealthy** levels. Some members of the public may experience health effects while members of the Sensitive Group may experience more serious health effects.
