24-HOUR IMPACT-BASED FORECAST FOR GHANA

Weather Forecasting Risk Table

Likelihood ↑	High (>60%)	G	H	I
	Medium (40% - 60%)	D	E	F
	Low (<40%)	A	B	C
		Low	Medium	High
		Impact →		

Weather Icons

Sector	Minimum Temperature (°C)	Maximum Temperature (°C)
Coast	25	34
Forest	24	37
Transition	23	37
Northern	22	39

SUMMARY: Early morning mist or fog patches are expected over the coast, forest and mountainous areas which may lead to reduced visibility to between **2km** and **8km**. As the day progresses, dry and hazy conditions with varying sunshine intensity will prevail across most areas within southern Ghana. However, there is a slight chance of localised rainfall over parts of the coastline and its inland areas from late afternoon into the evening. Northern Ghana will experience varying intensities of dry and hazy conditions throughout the forecast period.

CAUTION: Due to the dry conditions, the general public, especially in the transition belt and northern sector, is strongly advised to handle naked flames with extreme caution to prevent fire outbreaks.

SIGNED: Central Analysis and Forecasting Office (CAFO)
