Weather Icons

| Sector | Minimum Temperature (°C) | Maximum Temperature (°C) |
|-------------------|--------------------------|--------------------------|
| Coast | 24 | 33 |
| Forest | 23 | 36 |
| Transition | 23 | 36 |
| Northern | 24 | 39 |

SUMMARY: Mist and fog patches are expected to form in the early hours of this morning over the forest and mountainous areas to reduce visibility to a range from 3 km to 8km. As the day progresses, mostly sunny weather will prevail over most parts of the country with chances of localized thunderstorms or rain occurring over parts of the coast, middle and transition sectors from late afternoon into the evening. However, the northern sector will continue to experience varying intensities of dry and hazy weather throughout the forecast period.

CAUTION: Due to the dry conditions, the general public, especially in the transition belt and northern sector, is strongly advised to handle naked flames with extreme caution to prevent fire outbreaks.
