

GHANA METEOROLOGICAL AGENCY

SUMMARY

- In this dekad, **Akim Oda** in the Southern sector, recorded the highest rainfall accumulation of 59.5mm across the entire country whereas **Abetifi** recorded 0.8mm as the lowest rainfall accumulation.

Generally, the country recorded rainfall deficits as compared to the dekadal climatology (1991-2020), except for **Mim, Akim Oda, Ejura, Akatsi, Bechem, Ada, Sunyani, Sefwi Bekwai, Takoradi, Accra, Kpando, Vea** and their environs which recorded rainfall surpluses.

- **Bongo, Mankranso** and their environs recorded 37.8°C, the highest average maximum temperature for the dekad whereas **Abetifi** and its environs recorded 29.8°C, the lowest average maximum temperature across the entire country.

The country recorded warmer average day-time temperatures except for **Ho, Takoradi, Akatsi, Navrongo, Wenchi, Akuse, Axim** and their environs which recorded cooler day-time temperatures as compared to their climatological means (1991-2020)

- For average minimum temperatures, **Bongo** and its environs recorded 20.1°C as the lowest average minimum temperature whereas **Ada** and its environs recorded 27.0°C as the highest average minimum temperature across the entire country.

Generally, the country recorded warmer night-time temperatures. **Sunyani, Ho** and their environs recorded cooler night-time temperatures as compared to their climatological means (1991-2020).

- In the next dekad, above normal rainfall is expected in the **Transition zone**, through to the **eastern parts** of Southern Ghana whereas the **Forest zone** with places **along the Coast** is expected to record below normal rainfall.

- Generally, Southern Ghana is expected to record above normal temperatures with the exception of the **West Coast** likely to record below normal rainfall.
