Severity: Moderate

Certainty: Possible

Issued:

Sat 14 Mar 2026
08:30

Effective:

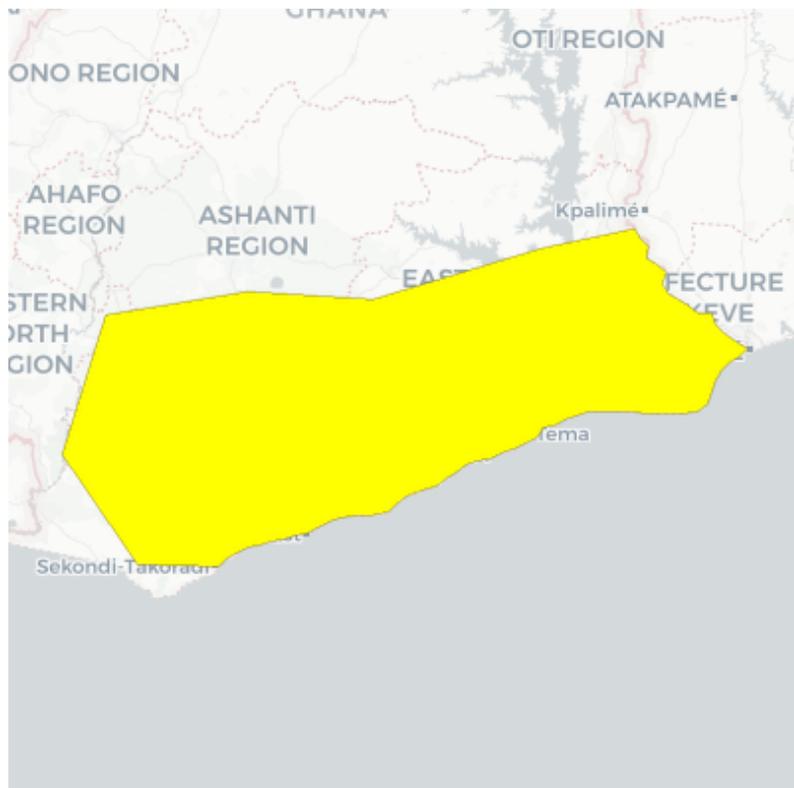

Sat 14 Mar 2026
08:30

Onset:

Sat 14 Mar 2026
09:00

Expires:

Sat 14 Mar 2026
14:00

Area:

southern Ghana

Description:

A rain and thunder bearing cloud system has been observed over the coast of Togo and Benin. The system is drifting drifting inland and is expected to bring rain of varying intensity to the Volta region this morning. Keta, Aflao, Denu, Dzodze, Ho and surroundings are expected to be affected between 9AM and 11AM. The storm is expected to propagate westwards into the Greater Accra and Eastern regions later this morning into the early afternoon hours. Ada Foah, Sege, Sogakope and surroundings are expected to be affected earlier before drifting to the western sides. The Central and Ashanti regions are also anticipated to experience similar conditions in the afternoon.

Instruction:

Seek shelter indoors when thunder is heard or lightning is visible. If driving, slow down and use headlights for better visibility. Keep updated on weather alerts through the Ghana Meteorological Agency.
